

# STERLING *Wind*™

## CONTENT LABEL

Sterling Planet offers this Renewable Energy Certificate or REC blend, which supports 'green power' production and builds the market for renewable energy. For every megawatt hour of renewable electricity generated, a REC is produced. REC subscribers continue to receive a separate electricity bill from their utility.

Enrollment supports renewable resources that produce significantly less pollution than conventional electricity sources. Businesses, colleges, non-profits, government agencies and individual consumers purchase this renewable energy to reduce the environmental impact of electricity use, help decrease dependence on foreign fuels, increase energy security, and support sustainable economic development.

**STERLING *Wind*™** will be made up of the following new<sup>1</sup> renewable resources:

### RENEWABLE ENERGY RESOURCES

### GENERATION LOCATION

New Wind

100%

Nationwide

<sup>1</sup> New renewables come from generation facilities that first began commercial operation on or after January 1, 1997.

The average home in the United States uses 949 kilowatt hours of electricity per month. Source: U.S. Environmental Protection Agency.

For comparison, the current average mix of energy sources supplying the U.S. includes: 49.7% coal, 19.3% nuclear, 3% oil, 18.7% natural gas, 6.5% large hydroelectric, and 2.3% renewables. Source: U.S. Energy Information Administration, Electric Power Annual, October 2006.
